

Education

📍 **Places of implementation:** universities, colleges, vocational schools, schools, kindergartens.

Access of visitors to the educational institution

Modern realities

In order for a pupil or student to be able to enter an educational institution, he / she most often presents a pass (card). This procedure requires the work of staff and takes time from visitors.

Task

- increase the speed and comfort of the identification procedure;
- prevent queues and uncontrolled crowds;
- reduce the costs of the institution for the maintenance of additional staff (caretakers, security guards);
- ensure hygiene during the recognition procedure;
- eliminate the influence of the human factor in decision-making on the admission of persons.

Advantages of innovative BIOSOL solutions

- simplicity and accuracy of the identification procedure, which does not require documents and cards;
- high-speed access of visitors to the educational institution without the participation of staff;
- the ability to control attendance at training;
- the accuracy of the recognition procedure does not depend on the condition of the skin;
- non-contact during identification, which meets the highest requirements in the field of hygiene.

📍 **Places of implementation:** universities, colleges, vocational schools, schools, kindergartens.

Zoning of premises with the provision of certain levels of access

Modern realities

On the territory of educational institutions there are many areas for study, recreation and other needs of pupils, students and teachers (dormitory, cooking area, teachers', webinar rooms, dean's office, laboratory premises). Each of them needs access control and protection from intruders.

Task

- provide / restrict access to specific facilities to certain individuals;
- protect the institution from intrusion;
- ensure zoning of premises with the provision of certain levels of access.

Advantages of innovative BIOSOL solutions

- an outsider will not be able to bypass the recognition procedure on the palm vein and enter the school;
- avoidance of omissions due to the human factor;
- flexible settings of access levels and time spent on the territory;
- use of the system involves monitoring visitors both online and in history mode;
- the possibility of creating a single system of access to facilities that are located on the territory of the institution or scattered throughout the country.

Education

📍 **Places of implementation:** universities, colleges, vocational schools, schools, kindergartens.

Payment for meals in schools

Modern realities

Parents give their children pocket money every day for extra food at school. Children may lose them or spend them on needs that adults consider inappropriate.

Task

- avoid the use of cash in educational institutions;
- ensure hygiene during meals by students;
- saving time and no queues.

Advantages of innovative BIOSOL solutions

- to pay for food, the system identifies the student by the individual palm vein, the required amount is automatically deducted from the parents' account;
- avoid contact of money with food that meets the highest hygienic standards;
- students buy food as quickly as possible, they have time for rest and other things.
- non-contact during identification, which meets the highest requirements in the field of hygiene.
